SYSADMLC

Assignment

Differentiate and similarities of admin and user when it comes to task, roles, responsibilities, and duties in system.

ADMIN

- Admin is a designated person for the system. Their task is to manage the companies system administration.
- Admins are the most powerful type of user. They are responsible for managing and controlling the system whether they like it to update anytime.
- Admin duties are handling patches and troubleshooting any technical issues that may arise.
- Admins roles can review and manage.

Their similarities are they can both login/logout, change password, have their own account, and can receive system notifications.

USER

- While, the users task are the one who can see the features inside and out of the system administration once the login their account.
- While, the users responsibilities are limited. They can access the file they need or reports in the system but they can't change the system from their device.
- While, the users duties are depend on their assigned role, it ranges from basic data entry to full administrative control.
- While, the user roles can submit and tracks.
